

## **FREE Tribal Transportation Safety Assessments (TTSA) NOW ACCEPTING APPLICATIONS**

UC Berkeley SafeTREC is inviting 12 California tribes to apply for the next round of **Tribal Transportation Safety Assessments**, beginning October 01, 2022 and to be completed by September 30, 2023. TTSA reports can help tribal staff and leadership **plan and prioritize safety improvements** for all travel modes (walking, bicycling, transit, driving) on tribal roads and pathways, and on roads accessing tribal lands. Tribal staff can also use the TTSA reports in support of their funding applications.

Funded by the California Office of Traffic Safety, through the National Highway Traffic Safety Administration, TTSA's are **FREE** to California tribes.

### **TTSA engagements include:**

- Collision data analysis by SafeTREC staff
- Community engagement survey to understand household transportation choices, challenges and opportunities. (On-line and/or printed)
- With Tribal staff, selection of several focus (study) areas on or near Tribal lands. (intersections, corridors, paths, or routes including walk/bike to schools)
- One-day on-site field visit by a safety expert (walk-audit / drive-about)
- Detailed illustrated report of findings with analyses, suggestions and concepts

### **To apply, or for more information, contact:**

### **Background**

Since 2015 SafeTREC has conducted 39 transportation safety assessments for California Tribes. The TTSA program is just one of SafeTREC's free resources for California tribal communities. Others include **Tribal Street Story** – a map-based “crowdsourcing” tool for gathering community input, and Tribal **Transportation Injury Mapping System (TIMS)**, a map-based crash data search and visualization tool.
